Re: APPLYING FOR JOB

Dear sir/madam;

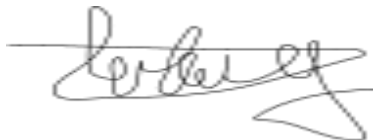

I am writing this letter to apply for the position of being a Data Scientist, I'm very interested in this job without any compliment. I'm fit with this position regarding the course I took in year one At ALU Data and Decision. In this course I learned Data visualization and data analysis, and also learnt mining data in Sql for databases course I took in year two, to sum up I'm very good in Python and R programming language and sql as well, and I'm capable to translate business needs in terms of data to technical specifications.

I am a student at African leadership university in year three. I have graduated in advanced level with a high score of 87.67 in Mathematics-Computer Sciences and Economics combination with A GRADES in both Mathematics and computer sciences and B GRADE in Economics, and the nature of my studies have prepared me well as you can see in my resume, I have gained experience in computer networking and programming languages through the internship, and my mother tongue is Kinyarwanda, but I am probably fluently in English.

I believe that I would be the best ideal candidate based on the fact I mentioned above, and I believe I have the skills and abilities to handle any task you require.

Thank you for taking the time to consider my application, and given a chance to apply for this internship, I would never be giving up to applying to your organization over the coming year for the following line of products launched whenever I miss this opportunity, and I'm available for contact to an interview if it's expected at any time don't hesitate to call me, thank you for time. I'm looking forward to hearing from you.

Yours faithfully

A handwritten signature in black ink, appearing to read 'Patrick Mushimiye', with a stylized flourish at the end.

Patrick MUSHIMIYE
