SUMMARY

I am a student at an African leadership university. I am passionate about coding, solving mathematics questions, solving and dealing with real-life problems. I'm also able to deal with either expected or unexpected changes in a certain compound and I have the ability to work in a team as well as manage and motivate them. I am also interested in collaborating with different people with different skills and culture because day to day I often learn from things around me. In my leisure time I do sports such as jogging, playing karate, football and barely listen soft music
